Alignment in Unix

- Fast tools for mapping large number of sequences by using compressed version of genome as an index; look for contiguous matches with small number of indels
- **Bowtie**
 - bowtie-build reference.fasta index_base
 - bowtie index_base reads.fq output.sam
 - Options
 - -q: input is FASTQ (default)
 - -f: input is FASTA
 - -p <int>: number of processor threads to use
 - --sam: output in SAM format
 - -v <int>: number of mismatches allowed in alignment
 - -m <int>: suppress reads with more than <int> valid alignments
 - Paired-end reads: bowtie -1 reads_1.fq -2 reads_2.fq index_base output.sam
- **BWA**
 - bwa index reference.fasta
 - Options
 - -t <int>: number of threads
 - -M: mark shorter split hits as secondary (for compatibility with Picard/GATK)
 - -R <string>: specify read group header line in SAM output
 - Short reads: bwa aln reference.fasta reads.fq > reads.sai
bwa samse reference.fasta reads.sai reads.fq > output.sam
 - Paired-end reads: bwa aln reference.fasta reads_1.fq > reads_1.sai
bwa aln reference.fasta reads_2.fq > reads_2.sai
bwa sampe reference.fasta reads_1.sai reads_2.sai reads_1.fq
reads_2.fq > output.sam
