

The three tables in genomics

Jeff Leek

- Dependencies
- Load the data from the web
- An expression set
 - Table 1: the genomics data
 - Table 2: the phenotype data
 - Table 3: the feature data
- Session information

Dependencies

This document depends on the following packages:

```
library(devtools)
library(Biobase)
```

To install these packages you can use the code (or if you are compiling the document, remove the `eval=FALSE` from the chunk.)

```
install.packages("devtools")
source("http://www.bioconductor.org/biocLite.R")
biocLite(c("Biobase"))
```

Load the data from the web

```
con=url("http://bowtie-bio.sourceforge.net/recount/ExpressionSets/bodymap_eset.RData")
load(file=con)
close(con)
```

An expression set

This kind of object in R contains the three tables

```
bm = bodymap.eset
bm
```

```
## ExpressionSet (storageMode: lockedEnvironment)
## assayData: 52580 features, 19 samples
##   element names: exprs
## protocolData: none
## phenoData
##   sampleNames: ERS025098 ERS025092 ... ERS025091 (19 total)
##   varLabels: sample.id num.tech.reps ... race (6 total)
##   varMetadata: labelDescription
## featureData
##   featureNames: ENSG000000000003 ENSG000000000005 ... LRG_99 (52580
##     total)
##   fvarLabels: gene
##   fvarMetadata: labelDescription
## experimentData: use 'experimentData(object)'
## Annotation:
```

Table 1: the genomics data

These are usually high dimensional measurements. In this case it is RNA-sequencing data. Each row is a gene and each column is a sample.

```
exp_data = exprs(bm)
dim(exp_data)
```

```
## [1] 52580    19
```

```
head(exp_data,n=5)
```

```
##          ERS025098 ERS025092 ERS025085 ERS025088 ERS025089

## ENSG000000000460     17      351      46       73
```

Table 2: the phenotype data

This is the “meta data” or “phenotype data” that is what you typically associate the genomic data with. Each column is a variable and each row is a sample.

```
pheno_data = pData(bm)
dim(pheno_data)
```

```
## [1] 19  6
```

```
head(pheno_data)
```

```
##      sample.id num.tech.reps tissue.type gender age  race
## ERS025098 ERS025098          2    adipose      F  73  caucasian
## ERS025092 ERS025092          2    adrenal      M  60  caucasian
## ERS025085 ERS025085          2     brain      F  77  caucasian
## ERS025088 ERS025088          2    breast      F  29  caucasian
## ERS025089 ERS025089          2     colon      F  68  caucasian
## ERS025082 ERS025082          2     heart      M  77  caucasian
```

Table 3: the feature data

This is information about the genes or other genomic features you are measuring. Each column is a variable and each row is a gene/feature.

```
feature_data = fData(bm)
dim(fData(bodymap.eset))
```

```
## [1] 52580      1
```

```
fData(bodymap.eset)[1:10,,1]
```

```
## [1] ENSG00000000003 ENSG00000000005 ENSG00000000419 ENSG00000000457
## [5] ENSG00000000460 ENSG00000000938 ENSG00000000971 ENSG00000001036
## [9] ENSG00000001084 ENSG00000001167
## 52580 Levels: ENSG00000000003 ENSG00000000005 ... LRG_99
```

Session information

Here is the session information

```
