The Bioconductor site

The [Bioconductor site](#) has a wealth of great information. Here are some pointers

- Package vignettes are a very important source of information for Bioconductor packages. You can access package vignettes from the help menu in RStudio or from the package page on Bioconductor.
- [Workflows](#). This is a new addition to Bioconductor; the intention is to provide across-package description of useful functionality.
- [Software packages](#); note the use of biocviews to the left of the page, this might be useful if you are searching for specific functionality.

Other resources

- The [Bioconductor support site](#); this is a great place to ask questions.
- The [posting guide](#) for the Bioconductor support site. Read this before asking questions; it will maximize your chance of getting a useful answer.
- [Stack Overflow \(R\)](#); this is a popular help site for computer programming.
- [Stack Overflow \(Bioconductor\)](#); this is a popular help site for computer programming.
- [R Documentation](#); a search engine for all documentation from all packages from CRAN and Bioconductor.
- [R Seek](#); like "R Documentation" but it also search a few other sites and is based on a different search engine.

Getting Vignettes in R

Package vignettes are installed inside of R. You can access vignettes in the following ways

1. Through the online help (for example in RStudio).

2. Through the `vignettes()` function in R, but that requires you know the name of the vignette.
3. Through the `browseVignettes()` function in *Biobase* which shows a list of installed vignettes in a browser (this is a different interface to the RStudio help interface).

Corrections

Improvements and corrections to this document can be submitted on its [GitHub](#) in its [repository](#).
